PROBLEM STATEMENT 05: THE PROJECT GRAVEYARD

HALFBUILT

Every unfinished project is a building waiting for its next floor.

PRESENTED BY

Team ragini.pawar24

Code Variant: Build 01 | Round 1 Idea Submission | 17 October 2026

THE IDEA

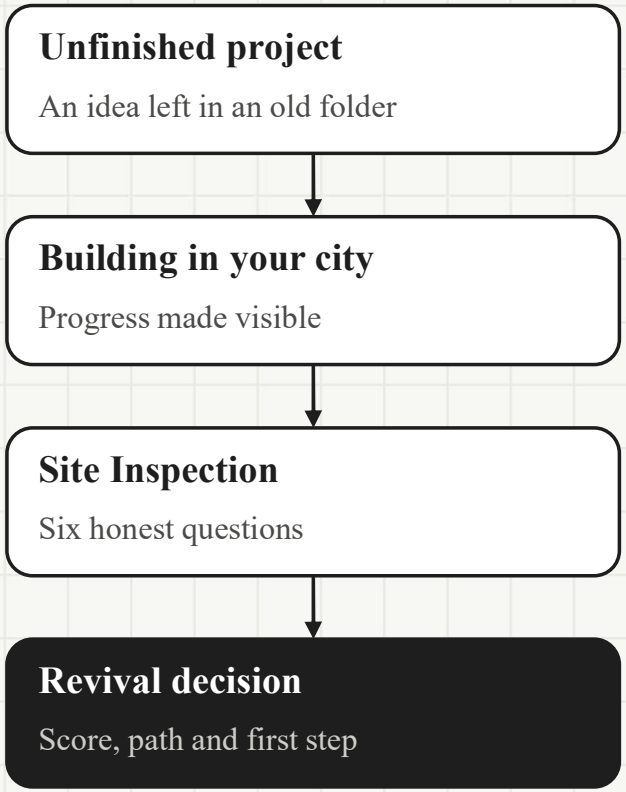

OVERVIEW

HALFBUILT

HALFBUILT is a web platform where builders keep the projects they started but never finished, and decide what to do with each one next.

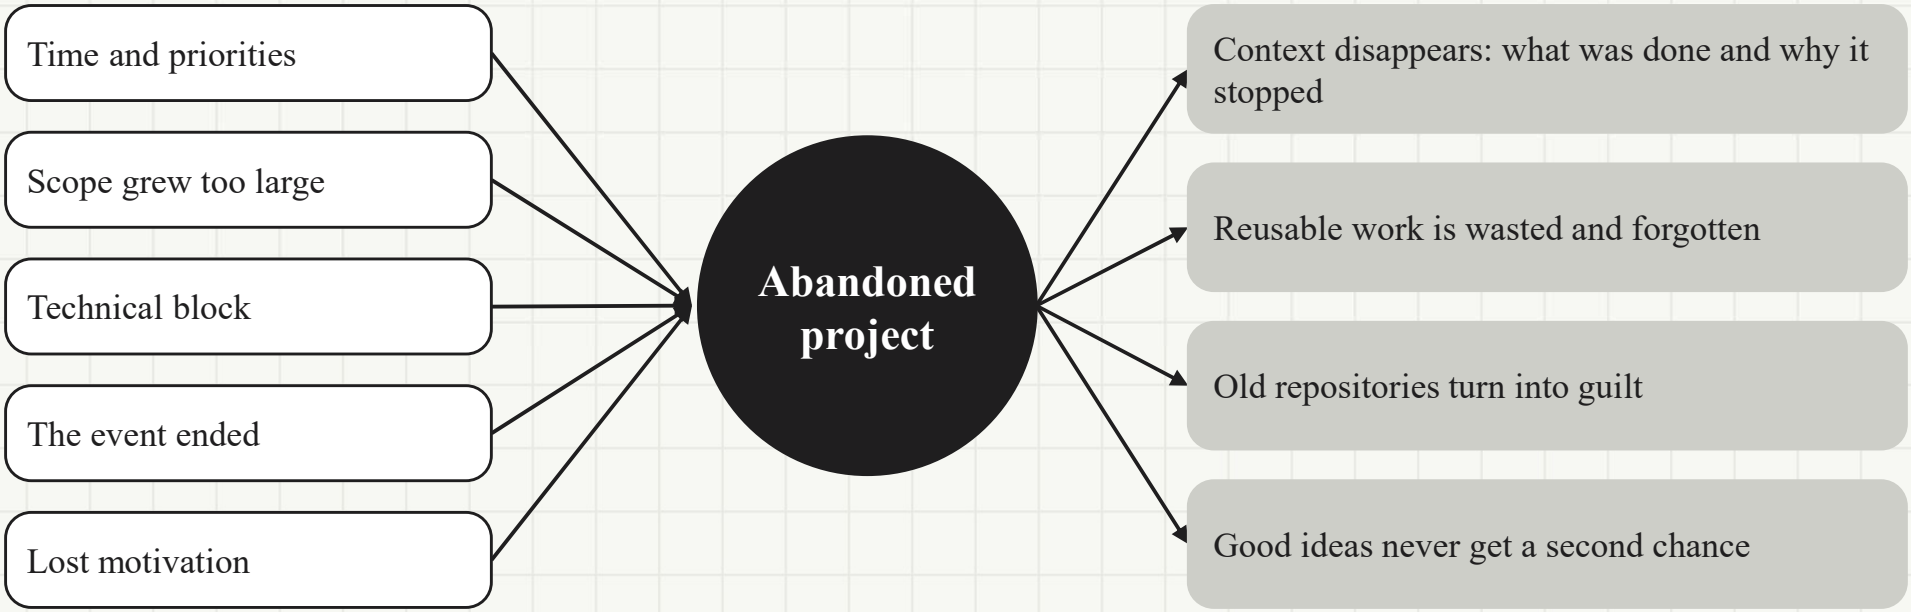

Every project becomes a building in the user's own animated city. Completed parts stand as solid, lit floors. Unfinished parts remain as scaffolding. Projects left alone slowly go dark.

A guided Site Inspection returns a Revival Score, a recommended path, the reasoning behind it and one small first step. An activity grid, a Revival Leaderboard and Builders' Square keep builders coming back.

PROBLEM UNDERSTANDING

01

WHY PROJECTS STOP

WHAT IS LOST

Core insight: the real problem is not storing unfinished projects. It is helping the builder decide what to do with each one.

WHY EXISTING TOOLS FALL SHORT

What a builder needs	GitHub	Task managers	Notes apps	HALFBUILT
Shows what was completed	Partly	Yes	Partly	**Yes**
Records why it stopped	No	No	Partly	**Yes**
Helps decide what to do next	No	No	No	**Yes**
Designed for paused work	No	No	No	**Yes**
Makes revisiting feel rewarding	No	No	No	**Yes**

GitHub shows code, not intent. Task managers are built for active work with deadlines. Notes scatter the story. None of them answers the question a builder actually has when opening an old project: what should I do with this now?

PROPOSED SOLUTION

02

A living city of your projects

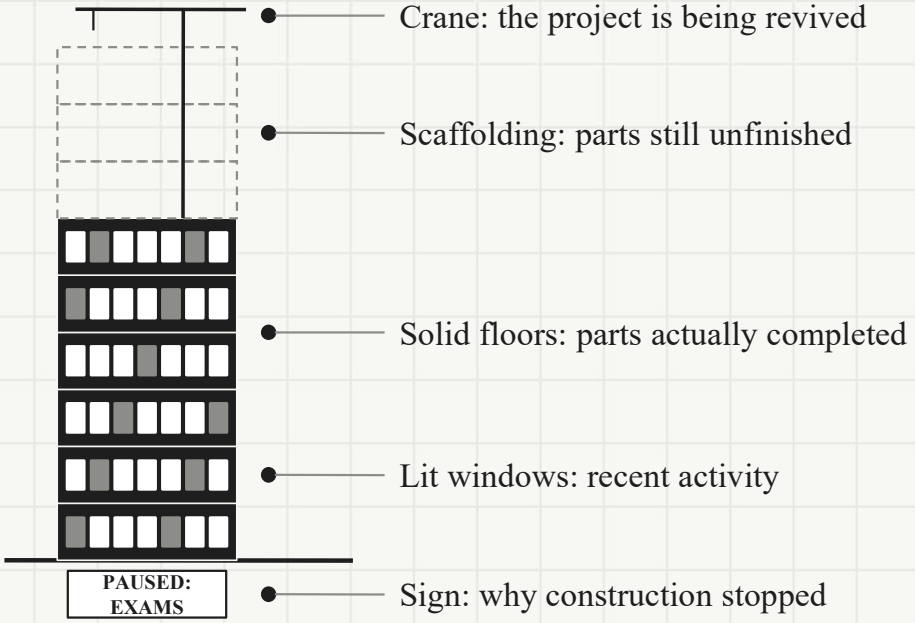

City view. Each project is a building. Its height shows progress and its scaffolding shows what is left.

Site Inspection. Six guided questions give a Revival Score from 0 to 100.

Revival paths. Restart, Continue, Change the Idea, Repurpose or Archive, with reasoning and a first step.

Not a task manager. No boards or deadlines, only reflection and revival.

Height = progress. Darkness = time since last touched.

THE CITY METAPHOR

02

PROJECT INFORMATION	WHAT THE USER SEES IN THE CITY
What the project was	Building name plate and profile page
What was completed	Solid, lit floors, one per completed part
What is still unfinished	Dashed scaffolding floors on top
Why it stopped	Sign at the base, for example Paused: Exams
Time since last activity	Windows go dark the longer it is left
Being revived	Crane on top, lights return, floors animate in
Archived with intent	Landmark with a plaque of lessons learned

TARGET USERS

03

Builders with unfinished projects

Student builders

College and hackathon projects left after deadlines and exams.

Gets: a record and a reason to return

Hackathon participants

Projects end the day the event ends and teams scatter.

Gets: saved context and co-builders

Working developers

Side projects paused because of work, very little free time.

Gets: the one project worth reviving

Designers and makers

Unfinished designs, prototypes and creative work.

Gets: a visual, non technical space

PRIMARY PERSONA

Riya, 20

Five hackathons, seven side projects, two finished.

Pain: a GitHub full of repositories she feels bad about.

With HALFBUILT: her habit tracker scores 72, the plan says Continue, she finds a backend co-builder and adds two floors in a week.

MAIN FEATURES

04 EVERY REQUIRED FEATURE COVERED

PROJECT ARCHIVE

My City

Every project as a building, with list view, search and filters

DESCRIPTION AND HISTORY

Project Profile

What it was, the goal, what is done, what is left, tools, links

CURRENT STATUS

Building State

Paused, Inspecting, Reviving, Rebuilt or Landmark

REASON FOR ABANDONMENT

Base Sign

Chosen in the inspection, shown at the base of the building

REVIVAL PATHS

Site Inspection

Score, recommended path, reasoning and a first step

PROJECT TIMELINE

Construction Log

Started, floors built, paused, inspected, revived

EASY TO REVISIT

Revisit Prompt

Dark buildings fade and one project is suggested each visit

7 / 7

key features from the brief, each expressed through the city theme

SIGNATURE FEATURES

04 WHAT MAKES IT DIFFERENT

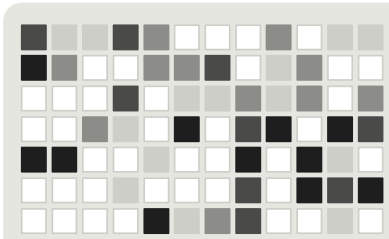

Namaste

Hello

Hola Bonjour Hallo

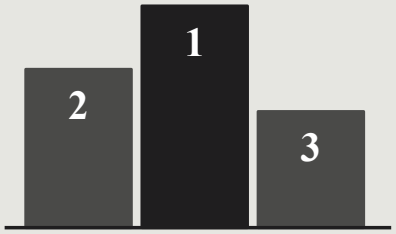

Multilingual welcome

The site opens with Hello animating through six languages before the landing page appears. Skippable.

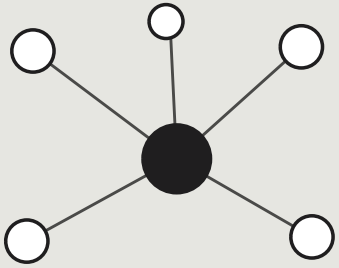

Activity grid

GitHub and LeetCode style boxes on every profile showing days with inspections, revivals and new floors.

Revival Leaderboard

Ranks builders by projects revived and floors added after revival, not by projects started.

Builders' Square

Networking space. Mark a project Open for co-builders with needed skills; others request to join.

USER FLOW

05 FIRST VALUE IN ABOUT THREE MINUTES

01 Hello intro
Greeting in six languages

02 Landing
Name top left, menu top right

03 Sign up / Log in
Create a builder profile

04 My City
All projects as buildings

05 Add a project
Building rises as parts are added

06 Site Inspection
Six guided questions

07 Revival plan
Score, path and first step

08 Act on it
Revive, rework or archive

After step 08 the city updates: lights, floors, timeline and activity grid.

ALWAYS IN THE MENU

Revival Leaderboard

Builders' Square

Profile and activity grid

SITE INSPECTION

SIX QUESTIONS

- Q1 How much is done?
- Q2 Why did it stop?
- Q3 Do you still care?
- Q4 Is it still relevant?
- Q5 Effort remaining?
- Q6 Any reusable parts?

Revival Score
0 to 100

RECOMMENDED PATH

CONTINUE
Good progress and still interested

RESTART
Still interested, but the work is outdated

CHANGE THE IDEA
Still interested, original idea was weak

REPURPOSE
Low score, but parts are reusable

ARCHIVE
Low score; save the lessons learned

Each result includes reasoning and a two hour first step. The user decides.

REVIVAL SCORE

05 TRANSPARENT AND EXPLAINABLE

HOW THE 100 POINTS ARE WEIGHTED

Reason type scores higher for time or priority reasons than for a weak idea, because those projects are easier to bring back.

EXAMPLE: HABIT TRACKER

Interest	**26 / 30**
Completion	**15 / 25**
Reason: exams	**18 / 20**
Relevance	**8 / 15**
Effort	**5 / 10**

72
Score

Result shown to the user

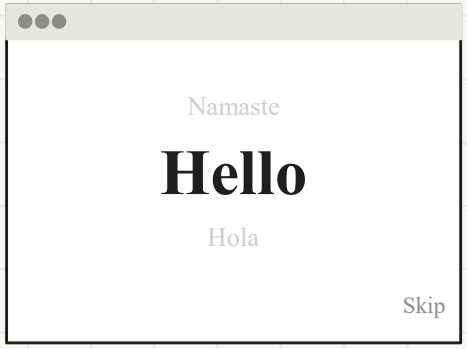

Path: CONTINUE

Why: 60 percent done, stopped for exams, still matters to you.

First step: finish notifications, about two hours.

UI/UX APPROACH

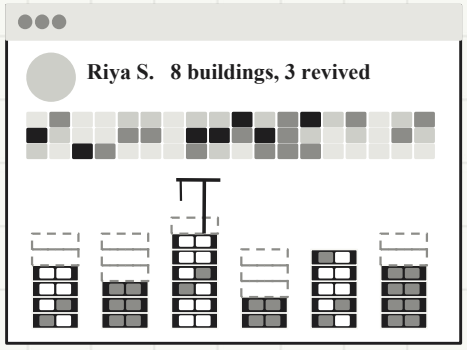

06 KEY SCREENS

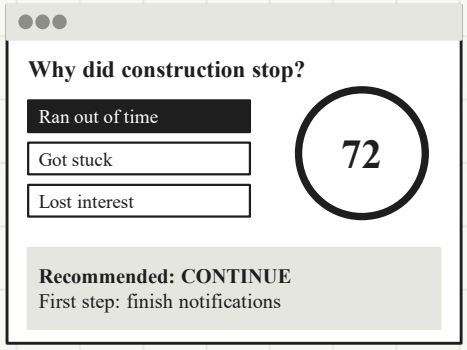

A. Intro: multilingual hello

B. Landing page

C. My City (profile)

D. Inspection and revival plan

Design principles

1. **Progress you can see**
   Height, scaffolding and lights show state without reading.
2. **Encourage, never shame**
   Paused construction, not failure. Warm, forward looking words.
3. **Motion with meaning**
   Floors rise when parts are added; lights switch on at revival.
4. **One clear action per screen**
   A single primary button so the next step is obvious.

VISUAL LANGUAGE AND MOTION

06

WHAT A FIRST VISIT FEELS LIKE

0.0 s	2.5 s	3.0 s	4.0 s	On revival
Hello	**Landing**	**Skyline**	**Scaffolding**	**Lights on**
cycles through six languages	fades in, name and menu appear	rises floor by floor	draws in on unfinished parts	crane returns

Layout

Name top left, menu top right, generous white space, clear grid.

Illustration

Flat, hand crafted SVG buildings; warm window light as the accent.

Typography

One expressive display face for headings, one clean sans for text.

Familiar patterns

Activity grid, leaderboard and profile work like GitHub and LeetCode.

Accessible by design: list view beside the city view, reduced motion respected, skippable intro, full keyboard navigation, and a sideways scrolling skyline on mobile.

TECH APPROACH

07 FRONTEND ONLY, DATA DRIVEN

VIEWS

City, Building, Project Profile, Inspection, Leaderboard, Builders' Square

LOGIC MODULES

Revival Score, path rules, activity grid counts, leaderboard ranking

CENTRAL STORE (Zustand)

Actions: add project, inspect, revive, archive, join project

DATA LAYER

Users, projects, activity events, saved to localStorage, seeded demo data

Data flows up. Views never keep their own copy, so one change updates every screen.

STACK

Framework	React with Vite
Styling	Tailwind CSS
Animation	Framer Motion
Buildings	SVG from project data
Routing	React Router
Login	Client side auth, stored profiles
Deploy	Vercel, public link

CORE DATA MODEL

07

User

```
id
name, avatar
skills[]
joinedOn
```

owns many

Project

```
id, ownerId
name, description, goal
completedParts[]
pendingParts[]
reason, lastTouchedOn
status
inspection{score,path}
openForCollab, skills[]
```

logs many

ActivityEvent

```
id, projectId
type
date
detail
```

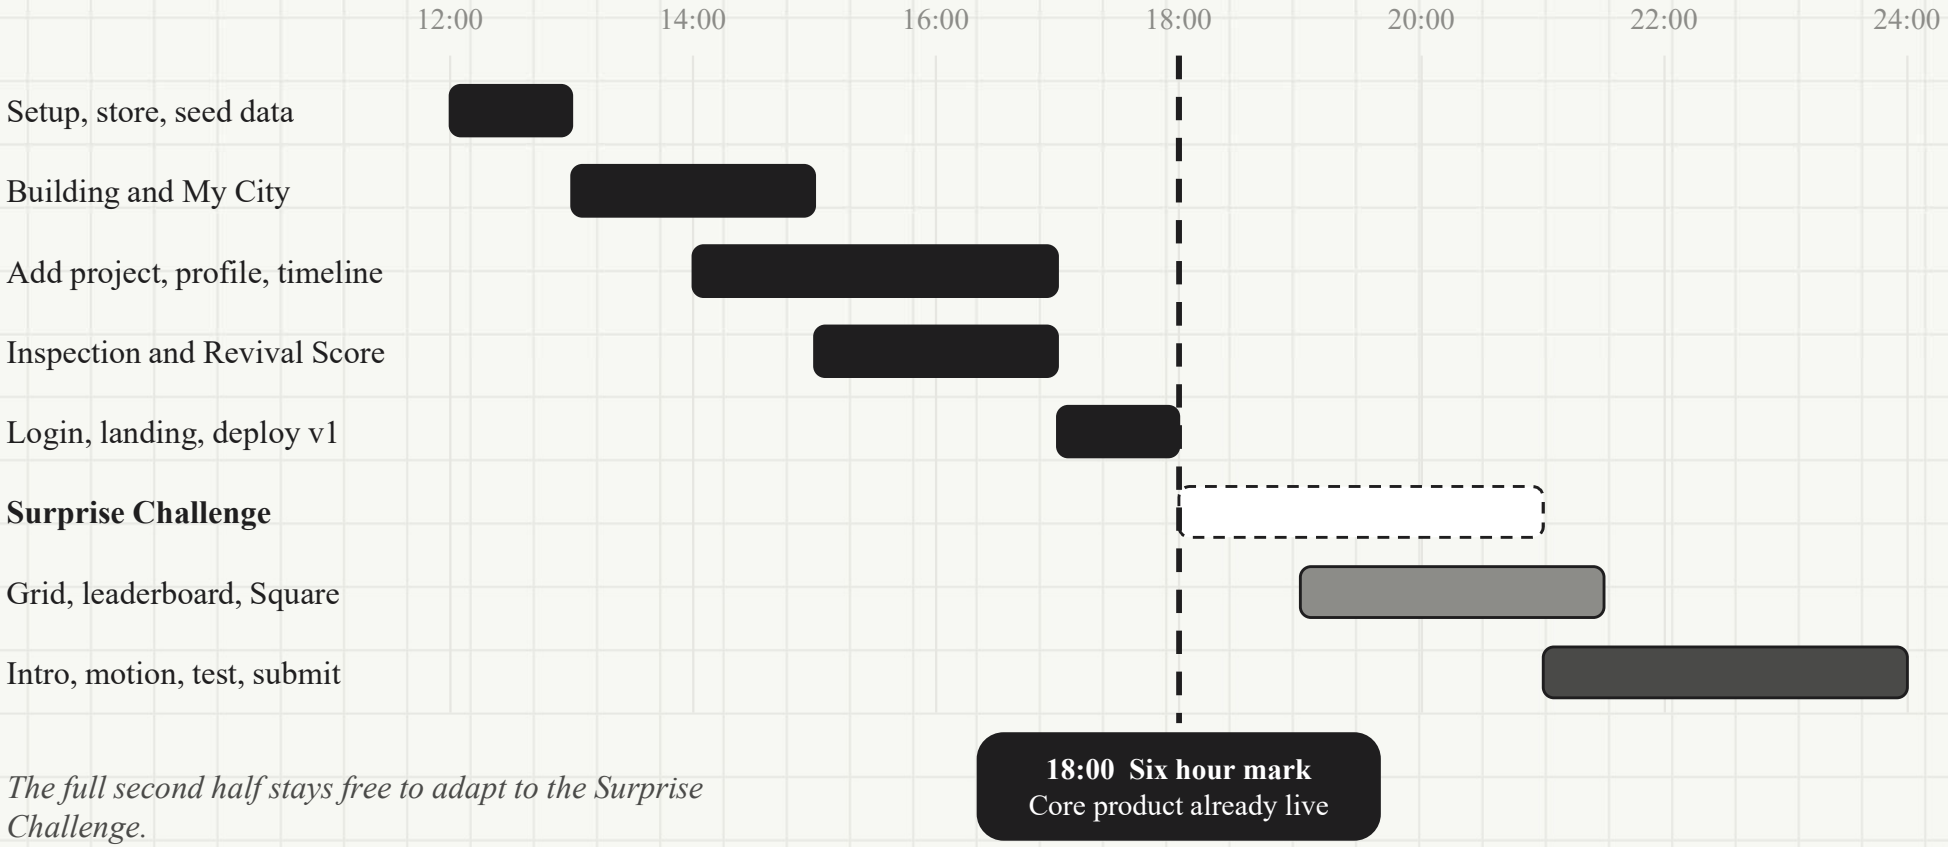

Activity events feed the activity grid, the timeline and the leaderboard.

completedParts become solid floors and pendingParts become scaffolding.

One record drives the building, the profile page, the inspection and the community views.

12 HOUR BUILD PLAN

08 24 OCTOBER

The full second half stays free to adapt to the Surprise Challenge.

FEASIBILITY

08 TEAM AND READINESS FOR CHANGE

ROLES

1. **Visual and animation**
   Building SVG, city view, intro, motion
2. **Core flows**
   Add project, profile, timeline, inspection
3. **Data and logic**
   Store, model, score, grid, leaderboard
4. **UI, community, QA**
   Landing, login, Builders' Square, testing, deploy

Smaller team: roles merge and stretch features drop first.

Built for the Surprise Challenge

Data drives every visual

A new requirement means a new field and a new layer, not new screens.

Inspection is configurable

Questions and paths are data, so they change in minutes.

Shared state

City view and list view read the same store.

Core ready by 18:00

Six full hours remain to adapt and polish.

RISKS AND MITIGATION

08

RISK	MITIGATION
Animations take too long	Static buildings first, motion added only after features work
City layout gets complex	2D SVG skyline in a simple row, no 3D libraries
Community needs real users	Seeded demo builders on the same store as personal projects
Drift toward project management	No tasks or deadlines; every feature must support reflection or revival
Deployment fails late	Deploy at 18:00 and redeploy after every milestone

WHY HALFBUILT FITS THE BRIEF

01

Problem understanding

Builders do not need storage, they need help deciding. We map why projects stop and what is lost.

02

Solution

All seven required features and all five revival paths are covered, each with reasoning.

03

UI/UX thinking

Progress readable at a glance, an encouraging tone, list view fallback, value in three minutes.

04

Innovation

Projects as a living city, a transparent Revival Score and a leaderboard that rewards finishing.

05

Feasibility

Frontend only, data driven components, tiered scope and an hour by hour plan.

06

Presentation

Every idea backed by a diagram, a flow or a wireframe.

THANK YOU

Unfinished does not mean failed. It means the next floor has not been built yet.
